

WeCan AI Usage Policy

Effective Date: 17 July 2025

Next Review Date: 17 January 2026

Policy Owners: Chief Technology Officer and General Counsel

Approved By: Director and Managing Partner

Executive Summary

WeCan AI specializes in designing and delivering tailor-made prompt-engineering workshops, empowering professionals to leverage Artificial Intelligence with confidence and skill.¹ This policy establishes a comprehensive, industry-leading framework for responsible AI adoption that simultaneously enables innovation and safeguards clients, employees, and the wider community.

This document integrates a robust eleven-pillar governance system that spans the entire AI lifecycle: encompassing tool selection, privacy, human oversight, transparency, risk management, training, audit, ethics, incident response, implementation timelines, and standing legal guidance.¹ This policy applies universally to every employee, contractor, consultant, and third-party partner who interacts with AI on behalf of WeCan AI worldwide.¹ Non-compliance with these provisions may lead to disciplinary action, up to and including termination of employment or contract.

The comprehensive nature of this policy, particularly its proactive integration of advanced legal and governance mechanisms goes beyond mere regulatory adherence, to establishing a strategic advantage by fostering trust, mitigating future liabilities, and governance structure, and reinforcing our commitment to being a trustworthy and forward-thinking AI partner.

Policy Scope and Applicability

This policy governs all Artificial Intelligence tools and services utilized in content generation, data analysis, client deliverables, internal operations, marketing, research, and any other business activity undertaken by WeCan AI. Its applicability is global, extending across all jurisdictions in which the company or its clients operate.

The policy is designed to apply to all employees, contractors, consultants, and third-party vendors who access, utilize, or interact with AI systems on behalf of WeCan AI. This broad scope ensures consistent application of responsible AI practices across the entire organizational ecosystem.

Furthermore, this policy is meticulously crafted to ensure compliance with a comprehensive array of global regulations. This includes, but is not limited to, the EU AI Act, the General Data Protection Regulation (GDPR), various U.S. state AI statutes (such as those in California and New York), Canada's Personal Information Protection and Electronic Documents Act (PIPEDA), Australia's Privacy Act, Singapore's Personal Data Protection Act (PDPA), and emerging regulations across the GCC and Africa.

The extensive applicability of this policy, encompassing all personnel and third-party partners, and its coverage of all AI applications, signifies an understanding that AI-related risks are multifaceted. These risks extend beyond potential legal penalties to include significant reputational, ethical, and operational exposures. The policy's eleven-pillar governance system, which incorporates principles such as ethics, human oversight, and robust incident response, underscores a holistic approach to risk mitigation. This comprehensive view aims to embed a culture of responsible AI throughout the

organization, which is fundamental for long-term sustainability, operational resilience, and maintaining public trust in a field where ethical considerations and public perception are paramount.

Section 1 – AI Tools and Services Framework

This section details the stringent framework for the selection, evaluation, approval, and continuous monitoring of all AI tools and services utilized by WeCan AI.

1.1 Approved AI Tools and Services

WeCan AI maintains and internally publishes a dynamic inventory of approved AI tools.¹ Initial approved tools have undergone comprehensive due diligence and include:

- **Large Language Models:**
 - OpenAI ChatGPT (Enterprise/Team versions): Utilized for content generation, analysis, and consulting support.
 - Microsoft Copilot (Enterprise version): Employed for productivity enhancement and document creation.
 - Anthropic Claude (Professional/Team versions): Used for research, analysis, and strategic consulting.¹
 - Google Gemini (Enterprise version): Applied for multi-modal analysis and content creation including models Nano Banana.¹
- **Specialized AI Applications:**
 - OpenAI DALL-E (image generation): For visual content creation in presentations and materials.
 - OpenAI Sora (video generation): For video content creation, particularly for training materials.
 - Gamma (presentation AI): Facilitates automated presentation design and formatting.
 - Perplexity (research and analysis): Supports information gathering and fact-checking.
 -
- **Industry-Specific Tools:**
 - Tableau AI (data visualization): For advanced analytics and reporting.
 - Salesforce Einstein (CRM automation): Enhances customer relationship management.
 - HubSpot AI (marketing automation): Supports content marketing and lead generation.

The use of unauthorized AI tools is strictly prohibited across the organization.

1.2 Vendor Selection and Evaluation Criteria

All AI vendors must demonstrate compliance with rigorous, enhanced criteria to ensure security, data protection, transparency, and accountability.

- **Security and Compliance Requirements:** Vendors must possess a minimum of SOC 2 Type II certification or equivalent international standards, along with ISO 27001 information security management certification. Compliance with GDPR, supported by valid Data Processing Agreements (DPAs), is mandatory. Vendors are also required to undergo regular third-party security audits and penetration testing and implement multi-factor authentication and enterprise-grade access controls.
- **Data Protection Standards:** A default setting of "no customer data used for model training" is required. Data must be encrypted in transit and at rest (with AES-256 as a minimum standard). Vendors must provide data residency controls for international compliance, clear data retention and deletion policies, and established incident response and breach notification procedures.
- **Transparency and Accountability:** Vendors are expected to have published AI ethics principles and responsible AI practices. This includes providing regular algorithmic bias testing and mitigation reports, ensuring clear model versioning and change management, and offering accessible documentation of AI capabilities and limitations. Established customer support and escalation procedures are also critical.

The detailed vendor selection criteria, particularly the granular requirements such as AES-256 encryption and data residency controls, illustrate a robust approach to managing supply chain risk in AI. This goes beyond basic compliance checks to actively vet vendors for their inherent security architecture and operational resilience. By demanding these enhanced standards, WeCan AI proactively minimizes the likelihood and impact of potential data breaches or misuse

originating from third-party AI tools. This robust vendor management framework is vital for maintaining client trust and avoiding costly incidents, serving as a critical preventative measure within the company's overall risk management strategy.

1.3 Tool Approval Process

A comprehensive five-step approval procedure precedes every new AI tool rollout, encompassing both initial evaluation and ongoing monitoring to verify continued compliance.

- **Initial Evaluation:**
 1. **Technical Assessment:** Conducted by the IT security team.
 2. **Legal Review:** Terms of service and privacy policies are reviewed by the legal team.
 3. **Risk Assessment:** Performed by the AI Governance Committee.
 4. **Pilot Testing:** The tool undergoes pilot testing using non-sensitive data.
 5. **Final Approval:** Granted by the Chief Technology Officer and General Counsel.
- **Ongoing Monitoring:**
 - Quarterly vendor compliance reviews are conducted.
 - Annual comprehensive vendor assessments are performed.
 - Continuous monitoring of vendor security posture is maintained.
 - Regular updates to vendor agreements and Data Processing Agreements (DPAs) are implemented.

The detailed tool approval process, particularly the explicit involvement of the IT security team, legal review, and the AI Governance Committee, signifies that AI tool adoption is a cross-functional strategic decision, not merely an IT or business unit choice. The requirement for pilot testing with non-sensitive data further emphasizes a pragmatic, phased approach to minimize initial risk exposure. This structured approval process ensures that new AI tools are not only technically viable but also legally compliant, ethically aligned, and strategically beneficial. This comprehensive vetting process mitigates risks before widespread deployment and distributes accountability across key leadership roles.

Section 2 – Privacy and Data Protection Framework

This section outlines WeCan Analytics' comprehensive framework for ensuring privacy and data protection across all AI operations, adhering to global standards and client rights.

2.1 Data Classification and Handling

Data within WeCan AI is rigorously categorized to ensure appropriate handling and protection. The classifications include Public Data, Internal Data, Client-Confidential, Restricted Data, and Personal Data.

Specific AI processing rules are defined for each data category :

- **Public Data:** Approved for use with all AI tools.
- **Internal Data:** Approved exclusively for enterprise-grade AI tools.
- **Client Confidential Data:** Requires explicit client consent and enhanced security measures for any AI processing.
- **Restricted Data:** Prohibited from AI processing without explicit executive approval.
- **Personal Data:** Subject to strict compliance with all applicable privacy regulations and consent requirements.

For each category, processing rules, storage locations, encryption standards, and retention limits are clearly defined. The explicit AI processing rules by data category, coupled with the enhanced consent framework, demonstrate a sophisticated understanding that data privacy in AI necessitates nuanced control. This granular level of detail allows WeCan AI to build deeper trust with clients by offering precise control over how their data interacts with AI systems. This proactive approach also positions the company favourably for future regulatory demands for more detailed data governance, minimizing legal exposure from data misuse and strengthening client confidence, which is vital for a data-intensive business. It also prepares the company for an increasingly fragmented and stringent global privacy landscape.

2.2 Geographic Data Protection Compliance

WeCan AI adheres strictly to cross-border data transfer mechanisms, such as GDPR Standard Contractual Clauses, and meticulously observes local data localization requirements in regions like Saudi Arabia, UAE, and France. Detailed compliance requirements are established for various jurisdictions :

- **European Union (GDPR):** Requires lawful basis documentation for all AI processing, implementation of data subject rights (including access, rectification, and deletion), Data Protection Impact Assessments (DPIAs) for high-risk AI applications, appointment of a Data Protection Officer (DPO) for AI governance, and cross-border data transfer safeguards like Standard Contractual Clauses.
- **United States:** Mandates compliance with the California Consumer Privacy Act (CCPA) for California residents, adherence to state-specific AI regulations (e.g., New York, Illinois, Texas), Federal Trade Commission (FTC) guidelines, and sector-specific regulations (e.g., healthcare, financial services).
- **Other Jurisdictions:** Includes compliance with Canada's Personal Information Protection and Electronic Documents Act (PIPEDA), Australia's Privacy Act and AI Ethics Framework, Singapore's Personal Data Protection Act (PDPA), and continuous monitoring and adherence to emerging AI regulations in all other operating jurisdictions.

2.3 Consent Management and Client Rights

WeCan AI employs granular, multi-lingual consent forms to manage client permissions for AI usage. Clients retain fundamental rights, including the right to object to processing, demand human review of AI outputs, receive meaningful explanations, and obtain data portability. An enhanced consent framework and detailed client rights implementation are in place :

- **Enhanced Consent Framework:** Provides granular consent options tailored for different AI applications, clear mechanisms for consent withdrawal, regular processes for consent renewal, and documented consent audit trails. Multi-language consent forms are utilized for international clients.
- **Client Rights Implementation:** Encompasses the "Right to know" (full disclosure of AI usage in deliverables), the "Right to object" (opt-out mechanisms for AI processing), the "Right to human review" (human oversight for all AI-generated content), the "Right to explanation" (clear explanations of AI decision-making processes), and the "Right to data portability" (easy export of client data from AI systems).

The explicit inclusion of the "Right to human review" and "Right to explanation" as fundamental client rights demonstrates a forward-looking approach. While these rights are emerging or implied in broader privacy regulations, their direct integration into an AI policy shows foresight, particularly with the global emphasis on explainability and human oversight in new AI-specific regulations. By embedding these rights, WeCan AI prepares for a future where AI outputs are subject to greater scrutiny and accountability, mitigating the risk of "black box" liability. This proactive stance not only enhances the company's ethical standing but also prepares it for potential legal challenges related to AI decision-making, ensuring that AI is viewed as an augmentation tool rather than an autonomous, unexplainable system.

2.4 Prohibition on Model Training

Client data must never be used to train third-party or internal models without separate, explicit, written, and revocable consent from the client. This critical prohibition is also reinforced as a default setting in the vendor selection criteria.

Section 3 – Strengthened Human Oversight and Quality Assurance

This section details the multi-layered human review processes and stringent standards for AI-human collaboration, ensuring accuracy, ethical considerations, and accountability in all AI-assisted outputs.

3.1 Multi-Level Verification Process

A four-tier review system governs all AI-assisted outputs, with full audit trails logged immutably to ensure accountability and transparency.

- **Tier : Primary Review (Mandatory):** This initial stage involves subject matter expert verification of AI-generated content, rigorous fact-checking and accuracy validation, and confirmation of compliance with client requirements

and specifications. Technical accuracy and adherence to professional standards are also verified at this level.

- **Tier 2: Quality Assurance Review (Mandatory):** An independent quality assurance assessment is performed, including bias detection and mitigation review. This tier ensures consistency with company standards and methodologies, and reviews client communication and presentation quality.
- **Tier 3: Senior Review (Risk-Based):** For high-risk deliverables, a designated senior reviewer provides approval. This includes assessment of strategic alignment and business impact, legal and compliance review for complex projects, and final sign-off authority for client-facing materials.
- **Tier 4: Executive Review (Exception-Based):** C-level approval is required for sensitive or high-profile projects. This tier also involves Board-level oversight for strategic AI implementations, crisis management and incident response decisions, and policy exception approvals.

3.2 AI-Human Collaboration Standards

WeCan AI establishes clear standards for AI-human collaboration, specifying both prohibited AI applications and areas requiring mandatory human involvement.

- **Prohibited AI Applications:**
 - Fully automated client deliverables without human review are strictly forbidden.
 - AI-generated legal advice or compliance recommendations are prohibited.
 - Automated decision-making affecting employment or contracts is not permitted.
 - AI-generated financial or investment advice is forbidden.
 - Unsupervised AI interactions with clients are not allowed.
- **Required Human Involvement:**
 - Strategic planning and recommendation development must involve human input.
 - Client relationship management and communication require human interaction.
 - Quality control and final deliverable approval are human responsibilities.
 - Crisis management and incident response necessitate human oversight.
 - Ethical decision-making and judgment calls are reserved for human discretion.

The explicit listing of prohibited AI applications is a critical strategy for de-risking AI usage. By forbidding AI from autonomous roles in high-stakes areas such as legal advice, employment decisions, or unsupervised client interactions, WeCan AI directly addresses major liability and ethical concerns. Conversely, clearly delineating required human involvement ensures that human judgment, empathy, and ultimate accountability remain central, particularly in strategic, client-facing, and ethical domains. This demonstrates a mature understanding of AI's current limitations and the necessity of human oversight for critical functions. This framework protects the company from the most significant potential harms of AI misuse, builds client trust by guaranteeing human accountability, and aligns with global regulatory trends that emphasize human oversight in high-risk AI systems.

3.3 Documentation and Audit Trail Requirements

Comprehensive documentation and stringent audit trail requirements are mandated to ensure transparency and accountability.

- **Comprehensive Documentation:** A complete record of AI tool usage for each project must be maintained. This includes human reviewer identification and approval timestamps, version control for AI-generated content iterations, client communication records regarding AI usage, and incident reports and resolution documentation.
- **Audit Trail Specifications:** The policy requires immutable logging of all AI interactions, user authentication and authorization records, data access and modification logs, and system security and performance monitoring. Compliance verification and testing results must also be logged.

The detailed documentation and audit trail requirements, including immutable logging, user authentication, and data access logs, extend far beyond basic record-keeping. This level of detail indicates a strong emphasis on forensic readiness. In the event of an incident, dispute, or regulatory inquiry, WeCan AI will possess a clear, verifiable record of AI usage, human interventions, and data handling. This is critical for demonstrating compliance, establishing accountability, and effectively defending against any claims. This robust audit trail system is a cornerstone of legal defence and regulatory

compliance, enabling the company to prove due diligence and responsible AI practices, thereby significantly reducing legal and reputational risk.

Section 4 – Enhanced Transparency and Disclosure Framework

This section details WeCan Analytics' commitment to clear, comprehensive, and ongoing communication regarding its AI usage, both internally and externally.

4.1 Pre-Engagement Disclosure Requirements

Clients receive upfront disclosures regarding AI usage during both the onboarding process and project scoping.

- **Client Onboarding:** During client onboarding, a comprehensive AI usage disclosure document is provided. This document clearly explains the benefits and limitations of AI, specifically identifies the AI tools and applications that will be used, details data processing and privacy implications, and offers opt-out mechanisms and alternative service options.
- **Project-Specific Disclosures:** For each engagement, detailed AI usage plans are provided. This includes specific AI applications and their expected outcomes, information on human oversight and quality assurance processes, a timeline and deliverable specifications, and cost implications and value proposition.

4.2 Ongoing Communication Protocols

WeCan AI maintains robust ongoing communication protocols to ensure continuous transparency.

- **Regular Updates:** Monthly AI usage reports are provided to clients, alongside quarterly reviews of AI performance and outcomes, and annual comprehensive AI governance reports. Real-time incident notifications and updates are issued as needed, as are policy changes and regulatory updates.
- **Transparency Measures:** AI-generated content is clearly labelled. Detailed methodology explanations are provided, along with performance metrics and accuracy statistics. Confirmations of human oversight verification are shared, and continuous improvement progress reports are made available.

The extensive transparency requirements, ranging from pre-engagement disclosures to detailed public relations strategies, indicate that WeCan AI views transparency not merely as a compliance obligation but as a core business value. By proactively disclosing AI usage, its benefits, limitations, and the human oversight involved, the company effectively manages client expectations, builds trust, and pre-empts potential misinterpretations or legal challenges related to AI-generated content or services. This strategically positions the company as a responsible leader in the AI space. This comprehensive transparency framework significantly reduces reputational risk and enhances client loyalty by fostering an environment of open communication, which is particularly valuable in the nascent and often misunderstood field of AI.

4.3 Public Disclosure and Marketing Compliance

This policy establishes clear guidelines for public disclosure and marketing related to AI services.

- **Marketing Materials:** All marketing materials must accurately represent AI capabilities, clearly disclose limitations and human oversight, and comply with all applicable advertising regulations. Communication of ethical AI principles and highlighting industry best practices are also mandatory.
- **Public Relations:** WeCan AI engages in proactive communication regarding AI governance, including thought leadership on responsible AI usage, participation in industry collaboration and standard-setting, demonstrations of regulatory compliance, and sharing client success stories (with explicit permission).

The explicit inclusion of public disclosure and marketing compliance is highly significant. It acknowledges that internal policies must be consistently reflected in external messaging. Misleading marketing or a lack of public transparency can severely damage reputation and invite regulatory scrutiny, even if internal practices are robust. By ensuring marketing accurately represents AI capabilities and limitations, and by engaging in proactive public relations on AI governance, WeCan AI actively shapes its public image as a responsible and trustworthy AI practitioner. This holistic approach ensures that the company's commitment to responsible AI is consistently communicated across all touchpoints, reinforcing its brand and mitigating the risk of public backlash or regulatory fines due to misrepresentation.

Section 5 – Advanced Risk Management and Governance

This section details the robust structure and responsibilities of the AI Governance Committee and the comprehensive framework for assessing and mitigating AI-related risks.

5. AI Governance Committee Structure

The AI Governance Committee serves as a multi-disciplinary body responsible for overseeing all AI initiatives within WeCan AI. The Committee meets monthly, conducts quarterly risk dashboards, and performs annual policy reviews.

The composition of the AI Governance Committee is as follows :

Role	Representative
Executive Oversight	Director (Chair)
	Chief Technology Officer
	General Counsel
	Quality Assurance Director
	Information Security Manager
	Privacy Officer
Business Representation	Client Services Director
	Operations Manager
	Human Resources Director
	Marketing and Communications Lead
External Expert	Independent AI Ethics Advisor

The Committee's responsibilities include monthly governance meetings, quarterly risk assessments, annual policy reviews and updates, incident response and escalation, and strategic AI investment decisions.

The detailed structure of the AI Governance Committee, encompassing executive, technical, and business representation, highlights its role as the central hub for all AI-related decisions, risk assessments, and policy reviews. Its responsibilities, including strategic AI investment decisions, elevate its function beyond mere compliance to strategic guidance. This multi-disciplinary composition ensures that AI initiatives are evaluated from all critical angles, fostering balanced decision-making and preventing fragmented approaches. The committee acts as the primary accountability body, ensuring that AI development and deployment are consistently aligned with the company's values, legal obligations, and overarching strategic objectives, thereby minimizing fragmented decision-making and ensuring consistent application of the policy.

5.2 Comprehensive Risk Assessment Framework

Technical, business, legal/regulatory, and ethical/reputational risks are systematically scored for likelihood and impact, with mitigation owners and timelines assigned in a central risk register. The framework encompasses the following categories :

- **Technical Risks:** Include concerns related to model accuracy and reliability, data quality and completeness, system availability and performance, integration and compatibility issues, and cybersecurity vulnerabilities.
- **Business Risks:** Cover potential impacts on client satisfaction and retention, maintenance of competitive

advantage, operational efficiency, cost management and budget control, and strategic alignment and execution.

- **Legal and Regulatory Risks:** Pertain to privacy law compliance, intellectual property protection, contract terms and liability, adaptation to regulatory changes, and litigation and dispute resolution.
- **Ethical and Reputational Risks:** Address bias and fairness concerns, transparency and accountability, public perception and trust, employee acceptance and adoption of AI, and the company's industry reputation and leadership.

5.3 Risk Mitigation Strategies

WeCan AI employs a comprehensive approach to risk mitigation, categorized into preventive measures, detective controls, and corrective actions.

- **Preventive Measures:** Include regular AI model testing and validation, comprehensive staff training programs, robust vendor management processes, continuous monitoring and alerting systems, and proactive regulatory compliance management.
- **Detective Controls:** Involve automated anomaly detection systems, regular audit and compliance reviews, performance monitoring and reporting, client feedback and satisfaction surveys, and industry benchmarking and comparison.
- **Corrective Actions:** Encompass incident response and resolution procedures, continuous improvement processes, policy updates and enhancements, staff retraining and development, and vendor relationship management.

The detailed risk mitigation strategies, categorized into preventive, detective, and corrective actions, demonstrate a mature and systematic approach to risk management. This moves beyond simply identifying risks to actively planning for their avoidance, early detection, and effective remediation across the entire AI lifecycle. This holistic strategy is crucial for building resilient AI systems and operations, minimizing the likelihood and impact of potential failures. This framework demonstrates a sophisticated understanding of AI risks, enabling WeCan AI to proactively manage potential threats and ensure business continuity, thereby safeguarding its operations, financial stability, and reputation.

Section 6 – Enhanced Training and Competency Development

This section details the comprehensive training programs, competency assessment, and continuous development initiatives designed to ensure all personnel are equipped for responsible AI usage.

6.1 Comprehensive Training Program

WeCan AI implements a comprehensive training program to ensure all staff are proficient in responsible AI usage. Continuing education requires a minimum of 6 hours per year.

Audience	Core Training Hours	Role-Specific Hours	Specific Topics Covered	Recertification/Ongoing Maintenance	Competency
All Staff	8 (AI policy overview)	–	Privacy & data protection (4 hrs), Ethical AI (4 hrs), Security awareness (4 hrs), Incident reporting (2 hrs)	Annual exam ≥ 80%	
Consultants	(Included in Core)	2	AI tool usage and client communication	Annual exam + practical demo	
Managers	(Included in Core)	8	AI governance and oversight responsibilities	Annual exam + KPI review	
Technical Staff	(Included in Core)	6	AI implementation and security	Annual exam + code review	

Sales Team	(Included in Core)	6	AI disclosure and client education	Annual exam + client-pitch audit
Support Staff	(Included in Core)	4	AI-related support and troubleshooting	Annual exam + ticket audit

- **Mandatory Core Training (All Staff):** This training covers AI policy overview and requirements (8 hours), privacy and data protection fundamentals (4 hours), ethical AI principles and decision-making (4 hours), security awareness and best practices (4 hours), and incident reporting and response procedures (2 hours).
- **Role-Specific Training:** Tailored training includes AI tool usage and client communication for Consultants (2 hours), AI governance and oversight responsibilities for Managers (8 hours), AI implementation and security for Technical Staff (6 hours), AI disclosure and client education for the Sales Team (6 hours), and AI-related client support and troubleshooting for Support Staff (4 hours).
- **Advanced Training Programs:** Specialized programs cover AI ethics and responsible AI development (6 hours), advanced privacy and data protection (2 hours), AI risk management and governance (2 hours), technical AI implementation and optimization (24 hours), and AI law and regulatory compliance (8 hours).

The depth and breadth of this training program, encompassing mandatory core training, role-specific modules, and advanced programs, represent a significant investment in human capital. This goes beyond basic awareness to foster deep competency and ethical understanding across the workforce. The emphasis on competency assessment and certification ensures that training translates into demonstrable skills, making human expertise a primary line of defence against AI-related risks. WeCan AI recognizes that technology alone is insufficient; a well-trained, ethically informed workforce is paramount for responsible AI deployment, reducing the likelihood of misuse, errors, or ethical breaches. This represents a long-term investment in organizational resilience and a commitment to responsible innovation.

6.2 Competency Assessment and Certification

To ensure staff proficiency, WeCan AI has established initial certification requirements and ongoing competency maintenance.

- **Initial Certification Requirements:** Include a written examination (minimum 80% score), practical skills demonstration, case study analysis and presentation, peer review and feedback, and supervisor approval and sign-off.
- **Ongoing Competency Maintenance:** Mandates annual recertification examinations, continuing education requirements (6 hours annually), professional development participation, industry conference attendance, and knowledge sharing and mentoring.

6.3 Performance Monitoring and Improvement

WeCan AI monitors performance and supports continuous improvement through regular assessment methods and professional development support.

- **Regular Assessment Methods:** Include monthly skills assessments, quarterly performance reviews, annual comprehensive evaluations, peer feedback and collaboration reviews, and client satisfaction and feedback analysis.
- **Professional Development Support:** Provides external training and certification programs, industry conference and workshop attendance, professional association memberships, internal knowledge sharing sessions, and mentoring and coaching programs.

The inclusion of ongoing competency maintenance and performance monitoring highlights a recognition that AI is a rapidly evolving field where static training is insufficient. The policy mandates continuous learning and performance assessment, integrating feedback loops to ensure that employee skills and knowledge remain current with technological advancements, evolving best practices, and regulatory changes. This commitment to continuous professional development ensures that WeCan Analytics' workforce remains agile and adaptable, capable of navigating the complexities of AI responsibly over time. This sustained competency directly contributes to the ongoing effectiveness of the entire AI usage policy and reinforces the company's leadership in the AI domain.

Section 7 – Audit and Compliance Monitoring

This section details the rigorous internal and external audit programs and the continuous improvement process, ensuring ongoing adherence to the AI Usage Policy and relevant regulations.

7.1 Internal Audit Program

WeCan AI maintains a robust internal audit program with reviews conducted at monthly, quarterly, and annual intervals. Results from these audits are reported to the Board Audit Committee.

- **Monthly Reviews:** Focus on AI-usage log reviews, privacy spot-checks, data processing and privacy compliance, human oversight and quality assurance, security controls and access management, and incident response and resolution tracking.
- **Quarterly Assessments:** Involve comprehensive policy compliance reviews, risk assessment and mitigation effectiveness, vendor performance and compliance evaluation, training program effectiveness assessment, and client satisfaction and feedback analysis.
- **Annual Comprehensive Audits:** Include a complete AI governance framework review, regulatory compliance verification, third-party vendor assessments, financial impact and cost-benefit analysis, and strategic alignment and performance evaluation.

7.2 External Validation and Certification

Beyond internal audits, WeCan AI subjects its AI governance framework to rigorous external validation and certification.

- **Annual Third-Party Assessments:** These assessments encompass independent security and privacy audits, compliance certification renewals, penetration testing and vulnerability assessments, AI governance framework validation, and industry best practices benchmarking.
- **Regulatory Compliance Verification:** Includes data protection authority consultations, regulatory examination preparation, compliance reporting and documentation, legal review and validation, and industry standard compliance verification.
- **Client-Requested Audits:** For these, the company develops custom audit scopes, prepares comprehensive documentation, facilitates on-site audits, handles findings remediation and follow-up, and provides certification and attestation.

The combination of detailed internal audits and extensive external validation, including annual third-party assessments, regulatory compliance verification, and client-requested audits, creates a robust, multi-layered assurance system. This goes beyond mere self-assessment, incorporating independent scrutiny and direct engagement with regulators and clients. This comprehensive approach is designed to identify issues early, ensure continuous adherence to evolving standards, and build deep trust with external stakeholders by demonstrating verifiable compliance. This rigorous audit and monitoring framework acts as a powerful signal of WeCan Analytics' commitment to accountability, significantly reducing the likelihood of non-compliance fines and enhancing its reputation as a reliable and trustworthy AI partner in the market.

7.3 Continuous Improvement Process

This policy is a living document, with lessons-learned reports, audit findings, regulatory changes, and client or employee feedback feeding into a rolling backlog of improvements reviewed quarterly by the AI Governance Committee. This continuous improvement process includes :

- **Performance Monitoring:** Involves tracking key performance indicators, benchmark comparison and analysis, trend identification and prediction, root cause analysis and resolution, and best practice identification and sharing.
- **Feedback Integration:** Includes client feedback collection and analysis, employee suggestion and improvement programs, industry expert consultation and advice, regulatory guidance incorporation, and vendor recommendation implementation.

The continuous improvement process is designed for proactive adaptation, not just problem-solving. By systematically integrating feedback from diverse sources—clients, employees, industry experts, and regulatory guidance—the policy is designed to evolve dynamically. This structured feedback loop ensures that the policy remains relevant and effective in

a rapidly changing AI landscape, preventing stagnation and fostering ongoing innovation within a compliant and responsible framework. This mechanism ensures the policy remains a "living document," constantly optimizing WeCan Analytics' AI practices and maintaining its leadership position in responsible AI by ensuring continuous alignment with best practices and emerging requirements.

Section 8 – Ethical AI Principles and Implementation

This section details the core ethical principles guiding AI development and use at WeCan Analytics, alongside structured frameworks for ethical decision-making and a commitment to social responsibility.

8.1 Core Ethical Principles

WeCan AI is committed to the following core ethical principles in all its AI endeavours :

- **Fairness and Non-Discrimination:** This principle is upheld through mandatory bias testing before production release, ensuring diverse training data and model validation, providing equal treatment and opportunity, maintaining transparent decision-making processes, and committing to continuous monitoring and improvement.
- **Transparency and Explainability:** Model outputs must be comprehensible to end-users or accompanied by plain-language explanations. This involves clear AI decision-making explanations, accessible documentation and communication, open model performance reporting, stakeholder engagement and feedback, and ensuring public accountability and responsibility.
- **Privacy and Data Protection:** This mandates data-minimisation and purpose-limitation by design, minimal data collection and processing, secure data storage and transmission, provision of individual rights and control, and consent-based data usage.
- **Human Autonomy and Dignity:** AI augments rather than replaces human decision-making. This is ensured by maintaining human oversight and final decision authority, preserving individual choice and control, respecting human values and preferences, enhancing empowerment and capability, and upholding dignity and respect.
- **Social Responsibility:** Projects are assessed for societal impact, and negative externalities are actively mitigated. This principle also focuses on maximizing positive impact and minimizing negative impact.

8.2 Ethical Decision-Making Framework

WeCan AI employs a structured framework for ethical decision-making and dilemma resolution :

- **Ethical Review Process:** This process includes identifying stakeholder impact, applying ethical principles, evaluating alternative solutions, conducting risk-benefit analysis, consulting with stakeholders, and documenting the final decision.
- **Ethical Dilemma Resolution:** Involves multi-stakeholder consultation, seeking expert ethical advice, reviewing precedents and best practices, maintaining a transparent decision-making process, and monitoring and evaluating outcomes.

8.3 Social Responsibility and Impact

The commitment to social responsibility extends to both maximizing positive impact and minimizing negative impact :

- **Positive Impact Maximization:** Achieved by enhancing client value and benefit, improving industry standards, promoting innovation and progress, sharing knowledge and education, and engaging with and supporting the community.
- **Negative Impact Minimization:** Focuses on preventing and mitigating harm, identifying and managing risks, protecting stakeholder safety, considering environmental impact, and promoting social equity and justice.

Section 9 – Incident Response and Crisis Management

This section details the structured approach to classifying and responding to incidents, implementing crisis communication, and ensuring business continuity and recovery in the context of AI usage.

9.1 Incident Classification and Response

Incidents are triaged within one hour of detection and classified into four levels based on severity :

- **Level 1 (Critical):** Includes severe incidents such as data breaches, system compromises, and regulatory violations.
- **Level 2 (High):** Covers significant issues like client complaints, AI malfunctions, and policy violations.
- **Level 3 (Medium):** Encompasses performance issues, training gaps, and minor compliance concerns.
- **Level 4 (Low):** Includes general inquiries, improvement suggestions, and routine maintenance.

Response procedures for any incident mandate immediate containment and assessment, stakeholder notification and communication, thorough root-cause investigation and analysis, implementation of corrective actions, and follow-up monitoring and verification to ensure resolution. Regulatory-reporting timelines, such as the 72-hour requirement under GDPR, are embedded in the playbooks.

9.2 Crisis Communication Plan

A comprehensive crisis communication plan is in place, detailing both internal and external communication protocols.

- **Internal Communication:** Involves immediate notification of the executive team, staff briefings and updates, reporting to the board of directors, consultation with legal counsel, and notification of the insurance provider.
- **External Communication:** Includes client notification and updates, reporting to regulatory authorities, managing media relations and issuing public statements, communication with partners and vendors, and engagement with industry stakeholders. The CEO or a delegated VP serves as the single external spokesperson.

9.3 Business Continuity and Recovery

To ensure service resilience, WeCan AI maintains robust business continuity and recovery measures.

- **Continuity Planning:** Includes activation of backup systems, provision of alternative services, resource reallocation and prioritization, timeline and milestone management, and progress monitoring and reporting.
- **Recovery Procedures:** Following an incident, the process involves system restoration and validation, resumption of normal operations, documentation of lessons learned, implementation of process improvements, and rebuilding stakeholder confidence. Redundant systems, daily encrypted backups, and workshop delivery contingencies are maintained.

Section 10 – Legal Recommendations and Compliance Guidance

This section outlines the immediate priorities, ongoing obligations, and strategic considerations from a legal and compliance perspective, ensuring the policy's enduring effectiveness and adherence to regulatory landscapes.

10.1 Ongoing Legal Obligations

WeCan AI maintains several ongoing legal obligations to ensure continuous compliance and effective contract management :

- **Regulatory Compliance:** This involves continuous monitoring of legislative developments, such as EU AI Act delegated acts and U.S. AI Bill of Rights. The policy must be updated and enhanced as needed to remain compliant with evolving regulations. Thorough documentation and reporting of compliance efforts are maintained, and regular consultation with legal counsel for advice on compliance matters is required. Adherence to relevant industry standards is also ensured.
- **Contract Management:** Regular reviews and updates of agreements with AI vendors are conducted. Client contract terms and conditions must clearly define provisions related to AI usage, and compliance with service level agreements is monitored. Continuous assessment of liability and insurance considerations related to AI is performed, and clear mechanisms for dispute resolution and arbitration are established. Annual compliance attestations are filed with relevant regulators where required, and version-controlled policy history and training records are maintained.

10.2 Strategic Legal Considerations

Beyond immediate and ongoing obligations, strategic legal considerations guide WeCan Analytics' long-term AI strategy:

- **Intellectual Property Protection:** This includes defining clear ownership and rights for AI-generated content, implementing measures to protect trade secrets and confidential information, and evaluating patent and

trademark considerations for AI innovations. Developing appropriate licensing and usage agreements for AI tools and outputs and implementing strategies to prevent and enforce against intellectual property infringement are also key. Key proprietary prompts and workshop materials are registered as trade secrets.

- **Liability Management:** This involves ensuring adequate professional liability insurance coverage, including appropriate limitation of liability clauses in contracts, and incorporating indemnification and hold harmless provisions where necessary. Establishing robust dispute resolution mechanisms, emphasizing mediation, and developing clear strategies for risk allocation and management are vital.

Section 11 – Enforcement and Exceptions

Violations of this policy may result in disciplinary measures, up to and including termination of employment or contract, and may expose the individual to personal liability. Exceptions to this policy require written approval from the AI Governance Committee. All approved exceptions must be thoroughly documented, specifying their scope, duration, compensating controls, and a defined sunset date.

Section 12 – Continuous Improvement

This policy is a living document. Lessons-learned reports, audit findings, regulatory changes, and client or employee feedback are systematically integrated into a rolling backlog of improvements. This backlog is reviewed quarterly by the AI Governance Committee to ensure the policy remains current, effective, and aligned with evolving best practices and regulatory requirements.

Section 13 – Acknowledgement

All personnel are required to acknowledge in writing that they have read, understood, and will comply with this policy within seven days of its publication.

Section 14 – Conclusion

By establishing comprehensive frameworks for privacy protection, human oversight, transparency, and regulatory compliance, WeCan AI ensures that its AI initiatives deliver maximum value while maintaining the highest standards of ethical conduct and legal compliance. The policy provides the necessary foundation for continued innovation and growth while diligently protecting client interests, employee rights, and the company's reputation. Regular review and updates, as outlined within this document, will ensure its continued effectiveness and alignment with evolving regulatory requirements and industry best practices.

This policy supersedes all previous AI usage policies and guidelines. All staff members are required to read, understand, and comply with this policy. Questions and concerns should be directed to the AI Governance Committee.
